SUBJECT	Report5 from the allocations coordinator		
Society	IARU	Country:	Germany
Committee:	C5	Paper number:	28
Contact:	Heinz-Günter Böttcher, DK2NH	e-mail:	hgboettcher@t-online.de

Dear members of committee C5,

Following the Vienna Interim Meeting of C5 there was no input in frequency allocation matters.
The allocation situation in the Reg. 1 countries to my knowledge did not change.

As responsible person for the Reg. 1 committee C5 allocation tables I'm very much dependent from the information of the member societies.

At the Vienna interim meeting of C5 there was interest to add the actual date of the data into the national allocation tables.

In most cases after checking the database I was not able to evaluate the actuality of the information. Some are new, some are very old, 10 years and more.

After the Vienna interim meeting I changed the tables in some minor positions.

I think it is necessary to check again carefully your national entries in the tables.

Depending on your response I will be able to actualise the tables and can add the date of validity.

In my opinion this is the most successful way to generate actual allocation data.

It makes very much sense to coordinate the tables with the thought of influencing the national administrations because of new allocations for the amateur radio service, e.g. 70 MHz or the frequencies above 300 GHz.

For your information I add all allocation tables as stored in my computer.
