Introduction

It is recommended that the principles for HF bandplanning in IARU Region 1 is discussed and decided on before discussing and deciding on the new complete IARU Region 1 bandplan proposals at the Conference.

Background

The present IARU Region 1 bandplan was decided on at the IARU Region 1 Conference in 1993. Proposals for a new IARU Region 1 HF bandplan have been discussed at all IARU Region 1 conferences since then.

Some principles for the IARU Region 1 HF bandplan were proposed by NRRL at the IARU Region 1 HF Interim Meeting in Friedrichshafen last year (2004), and were supported by the majority of the societies present at the meeting.

These principles will be proposed again by NRRL in a separate paper for the present conference. Other proposals for HF bandplanning principles should be discussed and decided on at the same time.

It is of paramount importance that the bandplanning principles be discussed and decided on before discussing and deciding on the new complete IARU Region 1 bandplan proposals at the Conference.

Key points and proposal

Therefore it is proposed that the HF Committee discusses and decides on the fundamental bandplanning principles before discussing and deciding on the new complete IARU Region 1 bandplan proposals at the Conference.

Recommendations

It is recommended for agenda decision that the C4 puts the proposal(s) for IARU Region 1 HF bandplanning principles on the agenda, prior to the proposals for new IARU Region 1 HF bandplans.
