Introduction

The incorporation of Emergency CoA into the Region 1 band plan has provided a useful focus for emergency communications activities. However, the choice of frequencies, particularly on 80 m has not been able to be adopted in many countries due to existing users or primary users (such as the time signal below 3,760 MHz).

No allocations are currently made for CoA in either the 160 or 30 m band though emergency communications groups use those bands when propagation required it.

This information paper lists frequencies which emergency communications groups have provided to me and which they have not blocked for publication on websites. By being informed of current usage, it is hoped that this will assist Committee C4 should any band plan changes be proposed for other reasons.
