SUBJECT	Extension of the 10 MHz band & Universal allocation at 5 MHz		
Society	TIR	Country:	Syria
Committee:	C4	Paper number:	19
Contact:	Omar Shabsigh YK1AO	e-mail:	shabs.om@scs-net.org

Introduction:

Noting that:

- the present trough in the solar cycle has shown how much the lower bands are required,
- having noticed that the 10 MHz band is open most of the day,
- the band allocated to amateur service on a non-exclusive basis (10.100 – 10.150 MHz is so narrow that it is used only for narrow band modes

Realizing that:

- there is a need for SSB communications for amateur service especially during disasters,
- applying the same logic to the 5 MHz band shows the need for a universal amateur service allocation

Decides to lobby for:

- an exclusive allocation of 150 KHz between 10.100 and 10.250 MHz
- an exclusive allocation of 100 KHz in the 5 MHz band.
