### Introduction

At the Interim Meeting of Region 1 HF Managers held in Friedrichshafen on 27<sup>th</sup>/28<sup>th</sup> June 2004 the subject of band-planning on the extended section of 7 MHz was discussed.

### Background

Since WRC-03 a small but increasing number of countries have granted the amateur service early access to the frequency segment 7,100–7,200kHz. At the time of writing these countries within Region 1 include Croatia, Cyprus, Denmark, Iceland, Ireland, Namibia, Norway, Poland, San Marino, Saudi Arabia, Serbia and Montenegro, Switzerland and the UK.

### Considering

That only a small number of countries within Region 1 have access to the frequency segment 7,100-7,200kHz

### Recommends

That until a majority of countries within Region 1 gain access to the extended band, the frequency segment 7,100-7,200 kHz should be used for CW/SSB only (2700 Hz maximum bandwidth).
